

Before watching - Write the numbers:

- 155 price of food that every consumer in the Netherlands wastes every year (given in euros)
- 2.6 billion price of food that all the consumers in the Netherlands waste every year (given in euros)
- 2 billion price of food that is wasted in the Netherlands in the food chain
- 10 the angle at which cucumbers can be bended (given as a percentage)
- 0,8 to 1 the ratio of width and height of a pepper
- 1.4 million number of people in the Netherlands who live below the poverty line
- 100,000 number of food packages that are handed out every week in the Netherlands
- 27,000 number of cucumbers wasted by one producer (out of 2.7 million)
- 7 how long it takes people to buy something in a supermarket (given in seconds)
- 5 the percentage of the wasted food that could be enough to feed people living below the poverty line

Watching the first part (until 5:05):

How did Fiona comment on this picture?

- We eat only the crown (2/3) and leave the stalk (1/3), which is wasting food

Why is food wasted in the food chain?

- supermarkets change their orders in the last minute
- more crops than expected
- they don't look well
- we want the food chain to be as financially efficient as possible
- straight cucumber are more easily transported
- equal pepper are more easily divided into packages

What's the problem about food packages?

- They healthy fruit and vegetables
- Even handing out 100,000 food packaged, it's not enough to help everyone in need (100,000 is only 7% of 1.4 billion people in need)

What do the tangerines stand for here?

- 5% of what is now wasted is enough to help people living below the poverty line

Stop at 5:05 and ask the question: What can be done to solve this problem? **Have a discussion with Ss**

Watch the rest of the video: What do these two pictures symbolize?

- The distance between the producer and consumer was much closer

- An application to help use food surplus
